Viswanatha Rao

Team Member Contribution Journal

Viktoriya Kurmisheva:

Created the GitHub repository for the group and organized the project files. Reviewed and analyzed the notebook code to understand how the different sections and outputs worked, then added comments explaining the important steps in the code. Completed the number of samples section in the Dataset Overview, including the number of samples belonging to each Iris species. Moreover, wrote Observation 1 in the Key Findings section by analyzing the scatter plot and explaining how Setosa differed from the other species. After discussing the lab with the group and gathering everyone's thoughts about what was learned, wrote the group's reflection journal and took responsibility for submitting the completed reflection and contribution journal.

Tien Manh Nguyen:

Completed the number of features section in the Dataset Overview and wrote Observation 2 in the Key Findings section. Also reviewed and analyzed the notebook code, improved some of the code comments, and checked that the answers matched the notebook results. Before uploading the notebook, completed a final review to make sure the required sections were filled in, the code and outputs appeared correctly, and the file was ready for submission. Tien Manh Nguyen then submitted the completed notebook to the group's GitHub repository.

Zaid Alayeddy:

Completed the number of classes section in the Dataset Overview and wrote Observation 3 in the Key Findings section. Carefully reviewed the notebook code and ran the cells to confirm that the calculations, graphs, and other outputs appeared correctly. Additionally, checked the completed Dataset Overview and Key Findings sections to make sure the written answers matched the notebook results. Using the contribution information provided by the group, wrote, reviewed, and finalized the contribution journal.
